PRODUCT DESCRIPTION

Want to dramatically increase your multi-rotor flight times without the penalty of added weight? We have just the solution!

The all new Multistar high capacity batteries are the result of extensive testing and development with one goal in mind...increasing flight times for your multi-rotor aircraft without the penalty of added weight.

We have achieved our goal by drastically increasing the battery capacity (mAh) while lowering the discharge rate. This results in a battery which is still capable of providing sufficient current (Amps) while offering much higher capacity when compared to a standard 20C+ LiPoly battery of the same weight.

What this all means is that Multistar batteries are able to provide flight times much longer than standard LiPoly battery packs without adding any weight to your multi-rotor model, making them absolutely ideal for use with aerial video and FPV multi-rotor aircraft.

We have a full range of Multistar High Capacity Multi-Rotor battery packs in the works and will be shipping
